

MOULD REMEDIATION SERVICES PROPERTY & CONTENTS

Although our name is Total Ventilation Hygiene, the experience we have gained from conducting successful mould remediation of intricate air-conditioning systems enables us to extend these services to entire mould affected buildings and their contents.

Along with our highly trained, qualified and experienced staff, our specialised remediation methods and technologies ensure that TVH are leaders in providing effective and lasting mould remediation solutions.

TVH conducts all mould remediation services in accordance with international best practice guidelines and standards. TVH staff are trained, certified and insured for conducting mould remediation services.

Safety Note: Proper containment and correct Personal Protective Equipment (PPE) are the number one priority during the delivery of mould remediation projects, big or small. Incorrect containment and/or PPE can cause cross contamination issues and create a health risk to employees, building occupants etc. . .

ASSESSMENT & MOISTURE CONTROL

Determine the extent of mould contamination along with the source and cause. Develop remedial scope and when required, undertake moisture rectification works to prevent mould regrowth.

MOULD REMOVAL & DRYING

Containment of the affected areas and drying of excessive moisture when required. All non-restorable surfaces, contents and structural components to be removed and disposed.

CLEANING & RECTIFICATION

Methodical cleaning of all restorable surfaces, contents and structural components to remove microbial contamination.

VERIFICATION & REINSTATEMENT

Verify that the area has been returned to "normal" or pre mould contamination conditions so that reinstatement works can be completed and the area reoccupied.
